

NeckCare Home™

Prescribed neck rehab from your clinician.

Why focus on the neck?

Your neck doesn't just support and move your head. It also helps control balance, vision and coordination. In people with neck pain, whiplash, or concussion, this system can become less accurate, leading to symptoms such as headaches, dizziness, visual disturbances, or lingering discomfort.

What is NeckCare Home™?

NeckCare Home™ offers interactive sensorimotor exercises with guided head movements. Using the camera on your device, the system tracks your movements in real time and gives you instant feedback on your performance.

Who is it for?

NeckCare Home™ is indicated for individuals who may benefit from exercising neck function.

- Limited range of motion
- Difficulty with eye-head coordination

Consult your clinician to determine if NeckCare Home™ is appropriate for your care plan.

Why It works

NeckCare Home™ offers interactive sensorimotor exercises with guided head movements. Using the camera on your device, the system tracks your movements in real time and gives you instant feedback on your performance.
